

The anatomy of a first-aid kit: 31 items you should always include.

No matter where you live or who lives with you, every home should have a first-aid kit. Because no matter what type of injuries or emergencies you might experience, from bruises to burns, allergic reactions to accidents, being prepared could help make all the difference.

How to make a first-aid kit. A first-aid kit doesn't have to be comparable to a medical bag or a hospital cart. Some come pre-assembled and others you can create yourself. Find the kit that will work best in your home, and then make sure you keep it up to date.

Where to keep a first-aid kit. Think plastic containers or tote bags, or even bathroom drawers or kitchen cupboards. Just make sure your first-aid kit is out of reach of children, but easily accessible to adults.

What to keep in your first-aid kit.

- Adhesive bandages (assorted sizes)
- Adhesive tape
- Aluminum finger splint
- Antibiotic ointment
- Antihistamine
- Antiseptic wipe packets
