Save Time With Data Bridge Services Available in Our New Policy System

As part of our systems transformation for Commercial Lines in your state, Frankenmuth Insurance is pleased to announce that data bridge services from your Applied or Vertafore/AMS (agency management systems) to the new iBIS Policy System are now available for Workers' Compensation, General Liability and Commercial Auto.

We hope you'll find that data bridge is a very efficient method to save entry time by seamlessly moving data from Applied or Vertafore/AMS into the new iBIS Policy system.

We look forward to introducing other lines of business available for data bridge in the near future, such as Property and Business Owners, as we continue to transform these services to be compatible with the new Policy System – all in an effort to make it easy to work with Frankenmuth Insurance.

If you or your staff have any questions related to these data bridge capabilities, please feel free to contact Agency Services Support at (800) 234-1133 extension 3000.
